## Course Description

This course focuses on marketing strategies and emerging issues in platform business models and the sharing economy. It covers the special features, pricing, customer acquisition and management, trust building, ecosystem and governance of such business models. The course also analyzes the business models of representative firms in several key sectors—lodging, ride-hailing, e-commerce, office sharing, and online travel—and the future trends of platform business models and the sharing economy. In addition to qualitative analysis, this course also discusses how data analytics are applied in these businesses and the special skills needed for such business models. This course combines lectures, HBS case studies, hands-on exercises, and student group project presentations.

There are mainly two parts of the course. The first part involves theory and analytics. Students will be provided with real data to compute network effects, optimal pricing strategies and demand forecasting. The second part involves applications of platform business models in several key sectors, including e-commerce, ride-hailing, lodging, and online travel. Students are encouraged to come up with business ideas around platforms and the sharing economy in different sectors, and hopefully they can implement these business ideas after graduation.

## Course Objectives

1. Students can obtain up-to-date knowledge and skills on platform business models and the sharing economy.  
2. Students can learn to use cutting-edge methods to analyze these new business models: Special features, pricing strategy, customer management, review systems, etc.  
3. Students can learn how to translate related knowledge and skills into real business ideas.  
4. Students will be provided with hands-on experiences of analyzing data from real platforms and sharing businesses using SPSS/Python/R, interpret and communicate the results.
